

## O540 Powered Arm Support

Empowering Independence

## INTRODUCING THE O540

Transform your daily life with the O540 Powered Arm Support from Partners in Medicine! This innovative device assists individuals with mobility impairments by making their arm weightless. Now, very little shoulder strength is needed to enable eating, drinking, lift a utensil, reaching a light switch, brushing teeth, or scratching an itch!. The O540 gives users control of their day-to-day activities and independence.

## HOW IT WORKS

The O540 Powered Arm Support is a revolutionary assistive device. Thanks to a combination of electrical and mechanical compensation users can achieve 'zero gravity' for their arm allowing it to float.

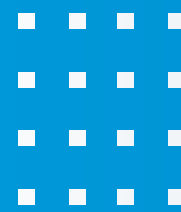

This allows individuals to lift their arm and experience natural movement and range of motion. And the user has complete control using push buttons or a smartphone app!

## O540: Control Your Mobility

The O540 Powered Arm Support provides power wheelchair users who have limited arm and shoulder function the freedom to live on their own terms. With a push of a button the O540 lifts a user's arm making it easier for them to take back control of their daily routine and provides an empowering sense of autonomy. Get in touch today and discover how the O540 can help you or someone close gain new independence!

# FEATURES AND BENEFITS

## 1 Simple Installation:

Easy to mount, works on any power wheelchair for left & right-handed users

## 2 Easy to Adjust:

Users can adjust the device to their needs through the power function, allowing quick and easy changes at any time.

## 3 Easy to Use:

A push button controller or smartphone app allows for lifting, tilting, or locking.

## 4 Strong:

Support loads up to 10 lbs, providing enough support to lift everyday objects like a glass of water, a book, or a remote control.

## 5 Instant Autonomy:

Gain independence in lifting tasks: drinking, eating, brushing teeth and hair, putting glasses on, and reaching light switches, and elevator buttons.

## RECOMMENDED FOR INDIVIDUALS WITH

- Muscular Dystrophy
- Duchenne MD
- Spinal Muscular Atrophy
- Spinal Cord Injury
- Amyotrophic Lateral Sclerosis (ALS)
- Multiple Sclerosis
- Stroke

# About Us

Partners in Medicine is a medical device sales company dedicated to providing wheelchair users with the best upper limb mobility devices. We identify leading-edge medical technology made outside of the US and import, market, sell and service these products to clinicians, hospitals, rehabilitation centers, and end-users. We provide our customers with freedom from dependence on others and improved quality of life through mobility solutions. We are committed to helping individuals restore their independence.
